University of Bremen, Germany

The Faculty of Mathematics at University of Bremen are seeking candidates

for a

Professorship in analysis

We are seeking a person with proven research track record in an active area of analysis, preferably with relations to dynamical systems. Desired are clear connections to the existing working groups in the department and experience in the acquisition of third party funded projects. We expect a readiness to cooperate in research with other faculties within and outside the University of Bremen, particularly with our partner-university in Oldenburg.

The University of Bremen intends to further increase the presence of women in academic employment; women are explicitly encouraged to apply.

International applications and applications of academics with a migration background are explicitly welcome. Candidates need to be aware that they will be expected to acquire some fluency in German language in the early course of their appointment. Disabled candidates with essentially equal qualifications will be given preference.

Through several measures the university explicitly supports work family balance.

Applications with the standard materials, certificates and note of the reference number P 6/16 should be sent by **April 24th 2016** to:
